

500KG DRUM HANDLER PLASTIC & STEEL

This is a simple slip on attachment for handling a wide range of plastic and steel drums. The support foot and load binder enable this to be carried safely. This attachment allows you to pick up any drum and does not have a lip or rim at the top like many other forklift drum lifters. This has been specially designed for the transportation of harsh chemicals over any terrain. It has a hot dipped galvanised finish and includes a safety chain to hold attachment to the carriage. Also included is a ratchet and strap to secure the drum, an instruction manual and certification.

1000KG DRUM HANDLER (HYDRAULIC) PLASTIC & STEEL

This hydraulic drum rotator is heavy-duty 205 litre drum lifter with hydraulic grab and rotation ability. A 12volt electric flow diverter is fitted for use on forklifts with only third hydraulic valve available. This option splits the hydraulic flow to either the grab or rotation functions, eliminating the requirement for the fourth hydraulic valve. To active the flow diverter the forklift must be fitted with a push button switch and control wire extending to the carriage. This lifter is able to pick a single drum from a pallet of four without disturbing the other three drums. The standard finish is painted enamel.

Specifications;

- Safe Working Load 1000kg
- Pocket Size 185 x 65mm
- Pocket Centres 874mm
- Load Centre 1307.5mm
- Unit Weight 115kg
- 130 Degree Rotation
- Horizontal C of G 700mm
- Manufactured strictly in accordance with AS 2359.1
